EVOLUTION

INTERNATIONAL JOURNAL OF ORGANIC EVOLUTION

PUBLISHED BY

THE SOCIETY FOR THE STUDY OF EVOLUTION

Vol. 47 **Subject Index** **1993**

Evolution, 47(6), 1993, pp. 1900–1912

AMPHIBIANS

body size, competition, hybridogenesis, metamorphosis, *Rana esculenta, R. lessonae*, survival, tadpole, 510

development, genetic variance, growth, hybridogenetic, metamorphosis, phenotypic plasticity, *Rana esculenta, R. lessonae*, tadpole, 1805

female choice, mate recognition, mating preferences, *Physaelaemus pustulosus*, sexual selection, species recognition, 647

BEHAVIOR

agonistic behavior, growth, intraspecific competition, predation, schooling, selection, social tolerance, 456

antipredator behavior, color pattern, garter snake, genetic correlation, heritability, interpopulation variation, quantitative genetics, *Thamnophis ordinoides*, 844

aposematic coloration, biased samples, butterfly larvae, correlation, discrete characters, gregariousness, inclusion of taxa, phylogenetic trees, tree resolution, 1182

character evolution, consistency index, homoplasy, morphology, phylogeny, 46

Coelopa frigida, female mating preference, sexual selection, 1788

courtship feeding, mating effort, Orthoptera, paternal investment, sexual selection, sperm competition, Tettigoniidae, 1203

courtship sounds, *Drosophila*, female choice, 768

defense, herbivory, neighbor effects, selection, 668

density-dependent natural selection, *Drosophila melanogaster*, *K*-selection, pupation height, *r*-selection, stabilizing selection, 176

Drosophila, *D. mauritiana*, *D. simulans*, mating behavior, reproductive isolation, speciation, 778

Drosophila spp., female choice, pheromone, picture-winged *Drosophila*, sexual behavior, 1407

Eurosta solidaginis, gall, herbivory, host race, sympatric speciation, 1696

female preferences, peak-shift, sexual imprinting, sexual selection, 333

fire ants, gene flow, monogyny, polygyny, social forms, *Solenopsis invicta*, 1595

Leptophlebia, mayflies, reproductive isolation, 1796

BIRDS

adaptation, Colorado, fluorescent dyes, hummingbirds, male and female function, nectar production rate, pollen dispersal, pollination success, 25

adaptive coloration, antipredator mechanisms, aposematism, elapid snakes, mimicry, vertebrates, 227

allometry, developmental constraints, Laridae, morphological integration, pleiotropy, *Sterna hirundo*, 1138

Archaeopteryx, energetics, efficiency, flight, muscle power, origins, 336

Archaeopteryx, flight, muscle power, 935

assortative mating, genetic correlation, heritability, *Hirundo rustica*, reproduction, sexual selection, sexual size dimorphism, tail ornaments, 417

badge size, honest signaling, house sparrow, phenotypic quality, reproductive success, 1161

biogeography, chickadees, genetic divergence, haplotype diversity, mtDNA, *Parus*, phylogeny, phylogeography, Quaternary, speciation, 195

Carpodacus mexicanus, male mate choice, pleiotropy, plumage coloration, sexual selection, 1515

character displacement, female mimicry, *Ficedula* spp., interspecific competition, species recognition, 939

coalescent process, control-region sequences, intraspecific phylogeny, island populations, mitochondrial DNA, 1118

correlations, finches, general size, growth trajectories, phenotypic variation, 1506

differential allocation hypothesis, female choice, *Hirundo rustica*, ornament size, reproductive effort, sexual selection, 1152

DNA fingerprinting, genetic diversity, island populations, population structure, silvereye, *Zosterops lateralis*, 1105

DNA profile, endangered species, kinship, parentage, pedigree analyses, *Picoides borealis*, population structure, 185

Euplectes, genetic drift, neutral evolution, Ploceidae, 696

female preferences, peak-shift, sexual imprinting, sexual selection, 333

gene flow, genetic distance, *Larus glaucescens*, population structure, *Thomomys bottae*, 264

geographic variation, gene flow, *Melospiza melodia*,

mitochondrial DNA, population structure, refugia, speciation, 717
leks, sexual dimorphism, sexual selection, sharp-tailed grouse, 691

Books Reviewed
A Critique for Ecology, 1890
Natural Selection: Domains, Levels and Challenges, 1893
The Natural History of Inbreeding and Outbreeding, 1896

Bryozoans
natural selection, phenotypic variance, skeletal morphology, *Stylopoma*, 1526

Canids
foxes, gene flow, genetic divergence, mtDNA, 1313

Chromosomal Evolution
gametic selection, house mouse, interdemic selection, *Mus musculus*, simulation, *t*-complex, transmission distortion, Wright's *F*-statistics, 1342
Haldane's rule, hybrid inviability, hybrid sterility, reproductive isolation, speciation, 1606
Haldane's rule, hybrid sterility, meiotic drive, speciation, 685
mottled hybrid zone, *Mus musculus domesticus*, Robertsonian fusion, tobacco mouse, zonal raciation, 1374

Coelenterates
clonal structure, disturbance, genotypic diversity, scleractinian corals, 1213

Coevolution
allozyme differentiation, host preference, host race formation, Salicaceae, sawfly, 300
Asteraceae, Chrysomelidae, Coleoptera, genetic constraints, genetic variation, host plants, insect-plant interactions, *Ophraella*, phylogeny, phytophagous insects, quantitative genetics, 888
bacteria, bacteriophage, competition, density-dependent selection, *E. coli*, frequency-dependent selection, predation, predator–prey interactions, resistance, restriction endonucleases, restriction-modification, selection, 556
Chiloglottis trilabra, floral evolution, floral height, orchid, plant-animal interaction, pollination, pollinator limitation, pseudocopulation, selection, sexual deception, thynnine wasp, 1681
defense, herbivory, neighbor effects, selection, 668
disease, genetic polymorphism, herbivory, specialist versus generalist, 1721
disease, herbivory, immunity, phenotypic plasticity, predation, 325
evolutionarily stable strategy model, quantitative genetic model, 982
Fremont cottonwood, narrowleaf cottonwood, *Pemphigua beate*, plant hybridization, *Populus angustifolia*, *P. fremontii*, resistance, RFLPs, 36
herbivory, heritability, host plant resistance, insect outbreaks, population density, 291
insect-plant interactions, *Larinus cynarae*, local extinctions, metapopulations, *Onopordum illyricum*, population structure, 1611

Competition
amphibian, body size, hybridogenesis, metamorphosis, *Rana esculenta*, *R. lessonae*, survival, tadpole, 510
bacteria, bacteriophage, density-dependent selection, *E. coli*, frequency-dependent selection, predation, predator–prey interactions, resistance, restriction endonucleases, restriction-modification, selection, 556
Bromus diandrus, density response, genotype-by-environment interaction, plant competition, phenotypic plasticity, 801
Bouteloua rigidiseta, fecundity, perennial grass, phenotypic plasticity, reaction norms, 1446
character displacement, female mimicry, *Ficedula* spp., interspecific competition, species recognition, 939
dormancy, genotype-environment interaction, germination, maternal effects, *Nemophila menziesii*, seed weight, 540
genetic variation, genotype-environment interaction, plasticity, reproductive effort, size variability, *Solidago*, 61
interference, resource partitioning, sexual reproduction, sib competition, 977

Crustaceans
asexual versus sexual, clones, *Daphnia*, general-purpose genotypes, parthenogens, salinity tolerance, thermal tolerance, 965
gene flow, physical oceanography, *Semibalanus balanoides*, thermal stress, 316

Development
adaptation, body growth, Collembola, genetic correlation, genetic variation, heavy metal, *Orchesella cincta*, tolerance, 619
age, allometry, development time, Gerridae, heterochrony, life history, *Limnoporus*, multivariate morphometrics, ontogeny, phylogeny, size, 1834
aging, *Drosophila melanogaster*, larval development, mutation accumulation, pleiotropy, reproduction, selection, survival, 445
agonistic behavior, growth, intraspecific competition, predation, schooling, selection, social tolerance, 456
allometry, developmental constraints, Laridae, morphological integration, pleiotropy, *Sterna hirundo*, 1138
amphibian, body size, competition, hybridogenesis, metamorphosis, *Rana esculenta*, *R. lessonae*, survival, tadpole, 510
amphibian, genetic variance, growth, hybridogenetic, metamorphosis, phenotypic plasticity, *Rana esculenta*, *R. lessonae*, tadpole, 1805

animal skeletons, complexity, constructional morphology, morphology, organic design, structural diversity, theoretical morphology, 341
animalia, collagen, fibronectin, gastrulation, homology, integrin, Porifera, 152
artificial selection, developmental rate, *Drosophila*, 1625
birth date, Embiotocidae, fecundity, fishes, growth, otoliths, phenology, selection, survival, 520
body size, *Drosophila melanogaster*, larval development, temperature, 213
copper tolerance, developmental selection, *Mimulus guttatus*, pollen selection, seed abortion, 13
correlations, finches, general size, growth trajectories, phenotypic variation, 1506
development time, host size, *Muscidifurax raptor*, parasitoid wasps, sex ratio, 1876

DROSOPHILA
adaptation, Brownian motion, directional selection, *Drosophila virilis*, macroevolution, natural selection, parsimony, phylogeny, rate tests, stabilizing selection, 1240
adaptation, cactus, *Drosophila mojavensis*, genetic correlation, heritability, host race, life history, reaction norm, *Stenocereus*, 750
aging, *Drosophila melanogaster*, larval development, mutation accumulation, pleiotropy, reproduction, selection, survival, 445
artificial selection, developmental rate, 1625
behavior, density-dependent natural selection, *Drosophila melanogaster*, *K*-selection, pupation height, *r*-selection, stabilizing selection, 176
body size, *Drosophila melanogaster*, larval development, temperature, 213
central and marginal populations, correlated responses, environmental stress, metabolic rate, realized heritability, species borders, 1255
central and marginal populations, *Drosophila serrate*, hybrid breakdown, multiple-peak epistasis, shifting-balance theory, 1271
courtship sounds, female choice, 768
development, evolution, pattern formation, phylogeny, segmentation, 1396
Drosophila mauritiana, *D. simulans*, mating behavior, reproductive isolation, speciation, 778
Drosophila pseudoobscura, evolution of sexual isolation, founder principle, genetic drift, Hawaiian *Drosophila*, speciation, 432
evolution, male mating ability, reproduction, senescence, 387
female choice, pheromone, picture-winged *Drosophila*, sexual behavior, 1407
hybridization, reproduction, 1616
interference, resource partitioning, sexual reproduction, sib competition, 977

ECOLOGY (SEE ALSO POPULATION DYNAMICS)
acanthuroid fishes, adaptation biogeography, evolutionary processes, phylogeny, 1557
adaptation, geographic variation, growth, prey availability, sexual size dimorphism, snake, 321
adaptive radiation, diversification, null models, phylogeny, topology, 253
allozymes, Atlantic rocky shores, cline, dispersal, genetic distance, inheritance of shell characters, morphometry, shell polymorphism, Spain, speciation, 1770
alpine, genetic variation, phenotypic variation, *Polemonium viscosum*, reproduction, wildflowers, 1073
Anguilla anguilla, *A. rostrata*, eels, parasites, 1632
antagonistic pleiotropy, environmental heterogeneity, genetic correlations, genotype-environment interaction, trade-offs, 327
assortative mating, chloroplast DNA (cpDNA), cytonuclear disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1432
Astrocaryum mexicanum, effective population size, gene flow, neighborhood, palm, pollen dispersal, seed dispersal, tropical rain forest, 75
beetles, *Cicindela dorsalis*, genetic variation, mitochondrial DNA, morphology, phylogeography, 1192
biogeography, birds, chickadees, genetic divergence, haplotype diversity, mtDNA, *Parus*, phylogeny, phylogeography, Quaternary, speciation, 195
breeding structure, *Chrysemys*, gene correlations, genetic variance, heterozygosity, recruitment, turtles, 1360
conservation biology, male sterility, outcrossing rate, plant density, population size, *Salvia pratensis*, 1094
clonal structure, disturbance, genotypic diversity, scleractinian corals, 1213
Dalechampia, evolution, mating systems, phylogeny, pollination ecology, 1480
environmental sex determination, genotype-environment interaction, major factors, *Menidia menidia*, polygenic, proportion of females, sex-determining mechanisms, 487
evolutionary genetics, mitochondrial DNA, morphological variation, *Osmerus*, smelt, speciation, sympatric populations, 813
gene flow, *Lathyrus latifolius*, male reproductive success, mating system, naturalized species, paternity analysis, 98
gene flow, physical oceanography, *Semibalanus balanoides*, thermal stress, 316
genetic variation, genotype-environment interaction, plasticity, reproductive effort, size variability, *Solidago*, 61
geographic structure, host selection, host shifts, host specificity, oviposition preference, *Papilio*, population divergence, specialization, Umbelliferae, 1585

ELECTROPHORESIS (SEE ALSO, VARIATION—GENETIC)
allozymes, Atlantic rocky shores, cline, dispersal, genetic distance, inheritance of shell characters,

morphometry, shell polymorphism, Spain, speciation, 1770
cohort analysis, hybrid zone, mosaic, reinforcement, 789
evolutionary novelty, fossils, genetic variation, introgression, land snail, *Mandarina aureola, M. ponderosa,* morphology, shell, 1539

Fish
Acanthuroid fishes, adaptation biogeography, evolutionary processes, phylogeny, 1557
adaptation, calcium concentration, *Gasterosteus aculeatus,* geographical variation, natural selection, postglacial differentiation, selective predation, 906
agonistic behavior, growth, intraspecific competition, predation, schooling, selection, social tolerance, 456
Anguilla anguilla, A. rostrata, eels, parasites, 1632
birth date, Embiotocidae, fecundity, growth, otoliths, phenology, selection, survival, 520
carrying capacity, demography, *Gambusia,* hybrid zones, life history, size-specific mortality, 632
environmental sex determination, genotype-environment interaction, major factors, *Menidia menidia,* polygenic, proportion of females, sex-determining mechanisms, 487
evolutionary genetics, mitochondrial DNA, morphological variation, *Osmerus,* smelt, speciation, sympatric populations, 813
evolutionary rate, *Gasterosteus,* mitochondrial DNA, phylogeny, Pleistocene refugia, Queen Charlotte Islands, zoogeography, 678

Fitness
adaptation, bacteria, *Escherichia coli,* temperature, thermal niche, thermal optimum, trade-off, 1
adaptation, Colorado, fluorescent dyes, hummingbirds, male and female function, nectar production rate, pollen dispersal, pollination success, 25
adaptive surface, correlated response, directional selection, disruptive selection, genetic correlations, peaks and valleys, punctuation, stabilizing selection, 280
annuals, character correlations, light response, norms of reaction, phenotypic plasticity, photosynthesis, *Polygonum persicaria,* 1009
antagonistic pleiotropy, environmental heterogeneity, genetic correlations, genotype-environment interaction, trade-offs, 327
aperture number, male fitness, pollen, pollen germination, pollen life expectancy, pollen-tube growth rate, polymorphism, 1080
β-galactosides, chemostats, *Escherichia coli, lac* operon, novel environments, potential for selection, 741
biparental inbreeding, fitness estimation, genetic markers, inbreeding depression, *Mimulus,* outcrossing, selfing, 361
birth date, Embiotocidae, fecundity, fishes, growth, otoliths, phenology, selection, survival, 520
central and marginal populations, *Drosophila serrate,* hybrid breakdown, multiple-peak epistasis, shifting-balance theory, 1271
competition, dormancy, genotype-environment interaction, germination, maternal effects, *Nemophila menziesii,* seed weight, 540
dominance, epistasis, fitness components, inbreeding depression, *Mimulus,* synergism, 864
Drosophila, evolution, male mating ability, reproduction, senescence, 387
gastropod, genetic constraint, genotype-environment interaction, *Littorina,* predator invasion, quantitative genetics, selection, shell form, 576
gene flow, group selection, population subdivision, Wright's shifting-balance theory, 1733
gene flow, *Lathyrus latifolius,* male reproductive success, mating system, naturalized species, paternity analysis, 98
genetic correlation, sex allocation, 946
Gryllus firmus, macroptery, microptery, morphology, sand cricket, selection, 1572
Haldane's rule, heterogamety, 1885, 1888

Fungi
Arabis, density, epidemiology, frequency-dependence, plant pathogens, *Puccinia,* 111
herbivores, *Ipomoea purpurea,* parasites, pathogens, selection, 970

Gastropod
electrophoresis, evolutionary novelty, fossils, genetic variation, introgression, land snail, *Mandarina aureola, M. ponderosa,* morphology, shell, 1539
genetic constraint, genotype-environment interaction, *Littorina,* predator invasion, quantitative genetics, selection, shell form, 576

Gene Flow
Astrocaryum mexicanum, effective population size, neighborhood, palm, pollen dispersal, seed dispersal, tropical rain forest, 75
canids, foxes, genetic divergence, mtDNA, 1313
coalescent process, control-region sequences, intraspecific phylogeny, island populations, mitochondrial DNA, 1118
Coelopa frigida, female mating preference, sexual selection, 1788
fire ants, monogyny, polygyny, social forms, *Solenopsis invicta,* 1595
F-statistics, island model, migration rates, population structure, 855
gene flow, group selection, population subdivision, Wright's shifting-balance theory, 1733
genetic distance, *Larus glaucescens,* population structure, *Thomomys bottae,* 264
geographic variation, *Melospiza melodia,* mitochondrial DNA, population structure, refugia, speciation, 717

Lathyrus latifolius, male reproductive success, mating system, naturalized species, paternity analysis, 98
physical oceanography, *Semibalanus balanoides,* thermal stress, 316

GENE REGULATION
β-galactosides, chemostats, *Escherichia coli, lac* operon, novel environments, potential for selection, 741

HYBRIDIZATION
amphibian, body size, competition, hybridogenesis, metamorphosis, *Rana esculenta, R. lessonae,* survival, tadpole, 510
amphibian, development, genetic variance, growth, hybridogenetic, metamorphosis, phenotypic plasticity, *Rana esculenta, R. lessonae,* tadpole, 1805
assortative mating, chloroplast DNA (cpDNA), cytonuclear disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1432
carrying capacity, demography, *Gambusia,* hybrid zones, life history, size-specific mortality, 632
central and marginal populations, *Drosophila serrate,* hybrid breakdown, multiple-peak epistasis, shifting-balance theory, 1271
chloroplast DNA, clonal variation, ribosomal DNA, *Taraxacum,* 136
cohort analysis, electrophoresis, hybrid zone, mosaic, reinforcement, 789
Drosophila, reproduction, 1616
Fremont cottonwood, narrowleaf cottonwood, *Pemphigua beate,* plant hybridization, *Populus angustifolia, P. fremontii,* resistance, RFLPs, 36
geminate species, Isthmus of Panama, reproduction isolation, speciation, 1883
Haldane's rule, heterogamety, 1885, 1888
Haldane's rule, hybrid inviability, hybrid sterility, reproductive isolation, speciation, 1606
Haldane's rule, hybrid sterility, meiotic drive, speciation, 685
mottled hybrid zone, *Mus musculus domesticus* Robertsonian fusion, tobacco mouse, zonal raciation, 1374

INBREEDING
additive genetic variance, dominance, founder effect, heritability, population bottleneck, 949
asexual reproduction, biparental inbreeding, cost of sex, kin selection, self-fertilization, 1874
Begonia, inbreeding depression, mating-system evolution, monoecious herb, outcrossing rate, 125
biparental inbreeding, fitness estimation, genetic markers, inbreeding depression, *Mimulus,* outcrossing, selfing, 361
colonizing species, gynodioecy, inbreeding depression, *Trifolium hirtum,* 1472
conservation biology, heterosis, inbreeding depression, population size, *Scabiosa columbaria,* 1669
cryptic self-incompatibility, *Erythonium grandiflorum,* inbreeding depression, mating system, outcrossing distance, outcrossing rate, preferential outcrossing, 915
dominance, epistasis, fitness components, inbreeding depression, *Mimulus,* synergism, 864
Hydrophyllum appendiculatum, inbreeding depression, maternal effects, outcrossing, selfing, 374

INSECTS (SEE ALSO DROSOPHILA)
Adalia bipunctata, alkaloid, chemical defense, Coccinellidae, constraints, jackknife, life history, principal-component analysis, quantitative genetics, trade-offs, 1229
adaptation, body growth, Collembola, genetic correlation, genetic variation, heavy metal, *Orchesella cincta,* tolerance, 619
Aedes albopictus, cytoplasmic incompatibility, reproductive isolation, *Wolbachia,* 673
age, allometry, development time, Gerridae, heterochrony, life history, *Limnoporus,* multivariate morphometrics, ontogeny, phylogeny, size, 1834
age-specific mortality, Bruchidae, cost of reproduction, force of mortality, senescence, survival analysis, 1302
allozyme, cline, genetic distance, Gerridae, transition zone, 957
allozyme differentiation, host preference, host race formation, Salicaceae, sawfly, 300
aposematic coloration, biased samples, butterfly larvae, correlation, discrete characters, gregariousness, inclusion of taxa, phylogenetic trees, tree resolution, 1182
Asteraceae, Chrysomelidae, Coleoptera, genetic constraints, genetic variation, host plants, insect-plant interactions, *Ophraella,* phylogeny, phytophagous insects, quantitative genetics, 888
beetles, *Cicindela dorsalis,* genetic variation, mitochondrial DNA, morphology, phylogeography, 1192
butterfly, correlation, nymphalid groundplan, pattern, 593
Callosobruchus maculatus, genetic variation, larval performance, oviposition preference, plant-herbivore interactions, 166
Chiloglottis trilabra, floral evolution, floral height, orchid, plant-animal interaction, pollination, pollinator limitation, pseudocopulation, selection, sexual deception, thynnine wasp, 1681
Coelopa frigida, female mating preference, sexual selection, 1788
cohort analysis, electrophoresis, hybrid zone, mosaic, reinforcement, 789
courtship feeding, mating effort, Orthoptera, paternal investment, sexual selection, sperm competition, Tettigoniidae, 1203
development time, host size, *Muscidifurax raptor,* parasitoid wasps, sex ratio, 1876
Eurosta solidaginis, gall, herbivory, host race, sympatric speciation, 1696

fire ants, gene flow, monogyny, polygyny, social forms, *Solenopsis invicta,* 1595
fitness, *Gryllus firmus,* macroptery, microptery, morphology, sand cricket, selection, 1572
Fremont cottonwood, narrowleaf cottonwood, *Pemphigua beate,* plant hybridization, *Populus angustifolia, P. fremontii,* resistance, RFLPs, 36
geographic structure, host selection, host shifts, host specificity, oviposition preference, *Papilio,* population divergence, specialization, Umbelliferae, 1585
herbivory, heritability, host plant resistance, insect outbreaks, population density, 291
insect-plant interactions, *Larinus cynarae,* local extinctions, metapopulations, *Onopordum illyricum,* population structure, 1611
Leptophlebia, mayflies, reproductive isolation, 1796

Life History

Adalia bipunctata, alkaloid, chemical defense, Coccinellidae, constraints, jackknife, principal-component analysis, quantitative genetics, trade-offs, 1229
adaptation, cactus, *Drosophila mojavensis,* genetic correlation, heritability, host race, reaction norm, *Stenocereus,* 750
age, allometry, development time, Gerridae, heterochrony, *Limnoporus,* multivariate morphometrics, ontogeny, phylogeny, size, 1834
aging, density dependence, extrinsic mortality, life span, senescence, 877
carrying capacity, demography, *Gambusia,* hybrid zones, size-specific mortality, 632
clutch size, condition, heritability, life-history evolution, maternal effects, 658
correlational selection, floral evolution, natural selection, phenotypic and genetic correlations, *Raphanus raphanistrum,* 704
demographic genetics, mating system, Plantaginaceae, *Plantago lanceolata,* population genetic structure, seed bank, Wright's *F*-statistics, 833
genetic correlations, *Impatiens,* maternal effects, plasticity, reaction norms, sun-shade adaptation, 1654
phenology, quantitative genetics, reproduction, 88

Mammals

aging, density dependence, extrinsic mortality, life history, life span, senescence, 877
complexity, entropy, evolutionary trends, 730
gametic selection, house mouse, interdemic selection, *Mus musculus,* simulation, *t*-complex, transmission distortion, Wright's *F*-statistics, 1342
gene flow, genetic distance, *Larus glaucescens,* population structure, *Thomomys bottae,* 264
integration, morphometrics, scapula, thin-plate spline, 1854
mottled hybrid zone, *Mus musculus domesticus,* Robertsonian fusion, tobacco mouse, zonal raciation, 1374

Molecular Evolution

Aedes albopictus, cytoplasmic incompatibility, reproductive isolation, *Wolbachia,* 673
assortative mating, chloroplast DNA (cpDNA), cytonuclear disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1432
bacteriophage, experimental molecular evolution, molecular systematics, parametric bootstrap, restriction-site evolution, selection, T7, 993
beetles, *Cicindela dorsalis,* genetic variation, mitochondrial DNA, morphology, phylogeography, 1192
biogeography, birds, chickadees, genetic divergence, haplotype diversity, mtDNA, *Parus,* phylogeny, phylogeography, Quaternary, speciation, 195
canids, foxes, gene flow, genetic divergence, mtDNA, 1313
cellular autonomy, cytoplasmic genomes, immortality, recombination, senescence, 1293
character evolution, irreversibility, Markov process, phylogeny, 236
chloroplast DNA, clonal variation, hybridization, ribosomal DNA, *Taraxacum,* 136
coalescent process, control-region sequences, intraspecific phylogeny, island populations, mitochondrial DNA, 1118
DNA sequence data, maximum-likelihood estimators, phylogenies, selection coefficients, 1420
evolutionary genetics, mitochondrial DNA, morphological variation, *Osmerus,* smelt, speciation, sympatric populations, 813
evolutionary rate, *Gasterosteus,* mitochondrial DNA, phylogeny, Pleistocene refugia, Queen Charlotte Islands, zoogeography, 678
generation time, molecular clock, population size, 688
geographic variation, gene flow, *Melospiza melodia,* mitochondrial DNA, population structure, refugia, speciation, 717

Morphology

adaptation, geographic variation, growth, prey availability, sexual size dimorphism, snake, 321
adaptive coloration, antipredator mechanisms, aposematism, elapid snakes, mimicry, vertebrates, 227
adaptive plasticity, Cercomeria, Digenea, Eucestoda, evolutionary loss, macroevolution, Monogenea, morphological diversification, parasitic platyhelminths, phylogenetic systematics, 495
allometry, developmental constraints, Laridae, morphological integration, pleiotropy, *Sterna hirundo,* 1138
allozymes, Atlantic rocky shores, cline, dispersal, genetic distance, inheritance of shell characters, morphometry, shell polymorphism, Spain, speciation, 1770
animal-pollinated plants, attraction size, flower size, pollinator attraction, sex allocation, evolutionarily stable strategy, 1711
animal skeletons, complexity, constructional mor-

phology, organic design, structural diversity, theoretical morphology, 341
aperture number, male fitness, pollen, pollen germination, pollen life expectancy, pollen-tube growth rate, polymorphism, 1080
aposematic coloration, biased samples, butterfly larvae, correlation, discrete characters, gregariousness, inclusion of taxa, phylogenetic trees, tree resolution, 1182
aposematism, conventional signalling theory, frequency-dependence, handicap signalling theory, honesty, mimicry, unpalatable prey, warning coloration, 400
arsenate, metal tolerance, phosphate, polymorphism, 313
assortative mating, genetic correlation, heritability, *Hirundo rustica*, reproduction, sexual selection, sexual size dimorphism, tail ornaments, 417
badge size, honest signaling, house sparrow, phenotypic quality, reproductive success, 1161
beetles, *Cicindela dorsalis*, genetic variation, mitochondrial DNA, phylogeography, 1192
behavior, character evolution, consistency index, homoplasy, phylogeny, 46
Bombus, *Ipomoea*, outcross rates, pollen discounting, polymorphism, selfing, selfing rates, 1688
Bryozoa, natural selection, phenotypic variance, skeletal morphology, *Stylopoma*, 1526
butterfly, correlation, nymphalid groundplan, pattern, 593
Carpodacus mexicanus, male mate choice, pleiotropy, plumage coloration, sexual selection, 1515
character displacement, female mimicry, *Ficedula* spp., interspecific competition, species recognition, 939
Chiloglottis trilabra, floral evolution, floral height, orchid, plant-animal interaction, pollination, pollinator limitation, pseudocopulation, selection, sexual deception, thynnine wasp, 1681
color-pattern variation, crypsis, natural selection, *Nerodia sipedon*, predation, snakes, 1819
Complexity, entropy, evolutionary trends, 730
cryptic incompatibility, *Eichhornia paniculata*, genetic markers, pollen-tube growth, Pontederiaceae, siring success, tristyly, 925
differential allocation hypothesis, female choice, *Hirundo rustica*, ornament size, reproductive effort, sexual selection, 1152
disease, genetic polymorphism, herbivory, specialist versus generalist, 1721
Drosophila, evolution, pattern formation, phylogeny, segmentation, 1396
electrophoresis, evolutionary novelty, fossils, genetic variation, introgression, land snail, *Mandarina aureola*, *M. ponderosa*, shell, 1539
Euplectes, genetic drift, neutral evolution, Ploceidae, 696
evolutionary genetics, mitochondrial DNA, morphological variation, *Osmerus*, smelt, speciation, sympatric populations, 813
female preferences, peak-shift, sexual imprinting, sexual selection, 333
fitness, *Gryllus firmus*, macroptery, microptery, sand cricket, selection, 1572
gastropod, genetic constraint, genotype-environment interaction, *Littorina*, predator invasion, quantitative genetics, selection, shell form, 576
genetic correlations, *Impatiens*, maternal effects, plasticity, reaction norms, sun-shade adaptation, 1654
genetic variation, heritability, *Lythrum salicaria*, reproduction characters, selection, 1457
integration, morphometrics, scapula, thin-plate spline, 1854
leks, sexual dimorphism, sexual selection, sharp-tailed grouse, 691

Paleontology

Acanthuroid fishes, adaptation biogeography, evolutionary processes, phylogeny, 1557
Anguilla anguilla, *A. rostrata*, eels, parasites, 1632
Archaeopteryx, birds, energetics, efficiency, flight, muscle power, origins, 336
Archaeopteryx, birds, flight, muscle power, 935
complexity, entropy, evolutionary trends, 730
evolutionary rate, *Gasterosteus*, mitochondrial DNA, phylogeny, Pleistocene refugia, Queen Charlotte Islands, zoogeography, 678

Phylogeny

Acanthuroid fishes, adaptation biogeography, evolutionary processes, 1557
accuracy, maximum parsimony, neighbor-joining, phylogenetic estimation, simulation, UPGMA, 471
adaptation, Brownian motion, directional selection, *Drosophila virilis*, macroevolution, natural selection, parsimony, rate tests, stabilizing selection, 1240
adaptive plasticity, Cercomeria, Digenea, Eucestoda, evolutionary loss, macroevolution, Monogenea, morphological diversification, parasitic platyhelminths, phylogenetic systematics, 495
adaptive radiation, diversification, null models, topology, 253
age, allometry, development time, Gerridae, heterochrony, life history, *Limnoporus*, multivariate morphometrics, ontogeny, size, 1834
aposematic coloration, biased samples, butterfly larvae, correlation, discrete characters, gregariousness, inclusion of taxa, phylogenetic trees, tree resolution, 1182
asteraceae, Chrysomelidae, Coleoptera, genetic constraints, genetic variation, host plants, insect-plant interactions, *Ophraella*, phytophagous insects, quantitative genetics, 888
behavior, character evolution, consistency index, homoplasy, morphology, 46
biogeography, birds, chickadees, genetic divergence, haplotype diversity, mtDNA, *Parus*, phylogeography, Quaternary, speciation, 195

coalescent process, control-region sequences, intraspecific phylogeny, island populations, mitochondrial DNA, 1118
character evolution, irreversibility, Markov process, 236
cladogenesis, extinction, phylogenetic tree, speciation, tree balance, tree symmetry, 1171
Dalechampia, evolution, mating systems, pollination ecology, 1480
development, *Drosophila,* evolution, pattern formation, segmentation, 1396
Diplomonadida, Dollo's Law, *Giardia,* parasites, specialization, 308
DNA sequence data, maximum-likelihood estimators, selection coefficients, 1420
evolutionary rate, *Gasterosteus,* mitochondrial DNA, Pleistocene refugia, Queen Charlotte Islands, zoogeography, 678
geminate species, Isthmus of Panama, reproductive isolation, speciation, 1883
Haldane's rule, heterogamety, 1885, 1888

PHYSIOLOGY
Adalia bipunctata, alkaloid, chemical defense, Coccinellidae, constraints, jackknife, life history, principal-component analysis, quantitative genetics, trade-offs, 1229
adaptation, bacteria, *Escherichia coli,* fitness, temperature, thermal niche, thermal optimum, tradeoff, 1
adaptation, body growth, Collembola, genetic correlation, genetic variation, heavy metal, *Orchesella cincta,* tolerance, 619
adaptation, calcium concentration, *Gasterosteus aculeatus,* geographical variation, natural selection, postglacial differentiation, selective predation, 906
animalia, collagen, development, fibronectin, gastrulation, homology, integrin, Porifera, 152
annuals, character correlations, fitness, light response, norms of reaction, phenotypic plasticity, photosynthesis, *Polygonum persicaria,* 1009
Archaeopteryx, birds, energetics, efficiency, flight, muscle power, origins, 336
Archaeopteryx, birds, flight, muscle power, 935
arsenate, metal tolerance, phosphate, polymorphism, 313
artificial selection, developmental rate, *Drosophila,* 1625
asexual versus sexual, clones, *Daphnia,* general-purpose genotypes, parthenogens, salinity tolerance, thermal tolerance, 965
body size, *Drosophila melanogaster,* larval development, temperature, 213
central and marginal populations, correlated responses, environmental stress, metabolic rate, realized heritability, species borders, 1255
central and marginal populations, *Drosophila serrate,* hybrid breakdown, multiple-peak epistasis, shifting-balance theory, 1271
copper tolerance, developmental selection, *Mimulus guttatus,* pollen selection, seed abortion, 13
drought stress, flood tolerance, genetic variation, norms of reaction, phenotypic plasticity, *Polygonum persicaria,* 1032
Fremont cottonwood, narrowleaf cottonwood, *Pemphigua beate,* plant hybridization, *Populus angustifolia, P. fremontii,* resistance, RFLPs, 36
gene flow, physical oceanography, *Semibalanus balanoides,* thermal stress, 316
genetic correlations, *Impatiens,* maternal effects, plasticity, reaction norms, sun-shade adaptation, D7
homeostasis, nitrogen, norms of reaction, nutrient stress, phenotypic plasticity, *Polygonum persicaria,* specialization, 1050

PLANTS (SEE ALSO REPRODUCTION—PLANT)
adaptation, cactus, *Drosophila mojavensis,* genetic correlation, heritability, host race, life history, reaction norm, *Stenocereus,* 750
allozyme differentiation, host preference, host race formation, Salicaceae, sawfly, 300
annuals, character correlations, fitness, light response, norms of reaction, phenotypic plasticity, photosynthesis, *Polygonum persicaria,* 1009
Arabis, density, epidemiology, frequency-dependence, plant pathogens, *Puccinia,* 111
arsenate, metal tolerance, phosphate, polymorphism, 313
Asteraceae, Chrysomelidae, Coleoptera, genetic constraints, genetic variation, host plants, insect-plant interactions, *Ophraella,* phytophagous insects, quantitative genetics, 888
Bouteloua rigidiseta, competition, fecundity, perennial grass, phenotypic plasticity, reaction norms, 1446
Bromus diandrus, density response, genotype-by-environment interaction, plant competition, phenotypic plasticity, 801
character evolution, irreversibility, Markov process, phylogeny, 236
chloroplast DNA, clonal variation, hybridization, ribosomal DNA, *Taraxacum,* 136
competition, dormancy, genotype-environment interaction, germination, maternal effects, *Nemophila menziesii,* seed weight, 540
correlational selection, floral evolution, natural selection, phenotypic and genetic correlations, *Raphanus raphanistrum,* 704
defense, herbivory, neighbor effects, selection, 668
drought stress, flood tolerance, genetic variation, norms of reaction, phenotypic plasticity, *Polygonum persicaria,* 1032
Fremont cottonwood, narrowleaf cottonwood, *Pemphigua beate,* plant hybridization, *Populus angustifolia, P. fremontii,* resistance, RFLPs, 36
genetic correlations, *Impatiens,* maternal effects, plasticity, reaction norms, sun-shade adaptation, 1654

genetic variation, genotype-environment interaction, plasticity, reproductive effort, size variability, *Solidago*, 61
herbivores, *Ipomoea purpurea*, parasites, pathogens, selection, 970
herbivory, heritability, host plant resistance, insect outbreaks, population density, 291
homeostasis, nitrogen, norms of reaction, nutrient stress, phenotypic plasticity, *Polygonum persicaria*, specialization, 1050
life history, phenology, quantitative genetics, reproduction, 88

PLATYHELMINTHS
adaptive plasticity, Cercomeria, Digenea, Eucestoda, evolutionary loss, macroevolution, Monogenea, morphological diversification, parasitic platyhelminths, phylogenetic systematics, 495

POPULATION DYNAMICS
additive genetic variance, dominance, founder effect, heritability, inbreeding, population bottleneck, 949
aging, density dependence, extrinsic mortality, life history, life span, senescence, 877
allopatric speciation, genetic revolutions, non-allopatric speciation, population bottleneck, postzygotic isolation, prezygotic isolation, reinforcement, reproductive isolation, speciation, 1637
allozyme, cline, genetic distance, Gerridae, transition zone, 957
coalescent process, control-region sequences, intraspecific phylogeny, island populations, mitochondrial DNA, 1118
conservation biology, heterosis, inbreeding depression, population size, *Scabiosa columbaria*, 1669
conservation biology, male sterility, outcrossing rate, plant density, population size, *Salvia pratensis*, 1094
demographic genetics, mating system, Plantaginaceae, *Plantago lanceolata*, population genetic structure, seed bank, Wright's *F*-statistics, 833
descent measures, dominance, epistasis, extinction and recolonization, genetic variance, migration, population structure, random genetic drift, 1758
disease, herbivory, immunity, phenotypic plasticity, predation, 325
DNA fingerprinting, genetic diversity, island populations, population structure, silvereye, *Zosterops lateralis*, 1105
DNA profile, endangered species, kinship, parentage, pedigree analyses, *Picoides borealis*, population structure, 185
Drosophila pseudoobscura, evolution of sexual isolation, founder principle, genetic drift, Hawaiian *Drosophila*, speciation, 432
effective population size, mating system, polygyny, sex linkage, sex ratio, 1329
Euplectes, genetic drift, neutral evolution, Ploceidae, 696
fire ants, gene flow, monogyny, polygyny, social forms, *Solenopsis invicta*, 1595
F-statistics, island model, migration rates, population structure, 855
gametic selection, house mouse, interdemic selection, *Mus musculus*, simulation, *t*-complex, transmission distortion, Wright's *F*-statistics, 1342
gene flow, genetic distance, *Larus glaucescens*, population structure, *Thomomys bottae*, 264
gene flow, group selection, population subdivision, Wright's shifting-balance theory, 1733
generation time, molecular clock, population size, 688
geographic structure, host selection, host shifts, host specificity, oviposition preference, *Papilio*, population divergence, specialization, Umbelliferae, 1585
geographic variation, gene flow, *Melospiza melodia*, mitochondrial DNA, population structure, refugia, speciation, 717
herbivory, heritability, host plant resistance, insect outbreaks, population density, 291
Hydrophyllum appendiculatum, inbreeding depression, maternal effects, outcrossing, selfing, 374
insect-plant interactions, *Larinus cynarae*, local extinctions, metapopulations, *Onopordum illyricum*, population structure, 1611
Leptophlebia, mayflies, reproductive isolation, 1796

PORIFERANS
Animalia, collagen, development, fibronectin, gastrulation, homology, integrin, Porifera, 152

PREDATION
adaptation, calcium concentration, *Gasterosteus aculeatus*, geographical variation, natural selection, postglacial differentiation, selective predation, 906
adaptive coloration, antipredator mechanisms, aposematism, elapid snakes, mimicry, vertebrates, 227
antipredator behavior, color pattern, garter snake, genetic correlation, heritability, interpopulation variation, quantitative genetics, *Thamnophis ordinoides*, 844
aposematism, conventional signalling theory, frequency-dependence, handicap signalling theory, honesty, mimicry, unpalatable prey, warning coloration, 400
bacteria, bacteriophage, competition, density-dependent selection, *E. coli*, frequency-dependent selection, predator–prey interactions, resistance, restriction endonucleases, restriction-modification, selection, 556
color-pattern variation, crypsis, natural selection, *Nerodia sipedon*, snakes, 1819
disease, herbivory, immunity, phenotypic plasticity, 325

PROKARYOTES
adaptation, bacteria, *Escherichia coli*, fitness, temperature, thermal niche, thermal optimum, tradeoff, 1

Aedes albopictus, cytoplasmic incompatibility, reproductive isolation, *Wolbachia*, 673
bacteria, bacteriophage, competition, density-dependent selection, *E. coli*, frequency-dependent selection, predation, predator-prey interactions, resistance, restriction endonucleases, restriction-modification, selection, 556
β-galactosides, chemostats, *Escherichia coli*, *lac* operon, novel environments, potential for selection, 741

PROTOZOANS
diplomonadida, Dollo's Law, *Giardia*, parasites, specialization, 308

QUANTITATIVE GENETICS
Adalia bipunctata, alkaloid, chemical defense, Coccinellidae, constraints, jackknife, life history, principal-component analysis, trade-offs, 1229
adaptive surface, correlated response, directional selection, disruptive selection, genetic correlations, peaks and valleys, punctuation, stabilizing selection, 280
antipredator behavior, color pattern, garter snake, genetic correlation, heritability, interpopulation variation, *Thamnophis ordinoides*, 844
Asteraceae, Chrysomelidae, Coleoptera, genetic constraints, genetic variation, host plants, insect-plant interactions, *Ophraella*, phylogeny, phytophagous insects, 888
Bouteloua rigidiseta, competition, fecundity, perennial grass, phenotypic plasticity, reaction norms, 1446
Bromus diandrus, density response, genotype-by-environment interaction, plant competition, phenotypic plasticity, 801
Bryozoa, natural selection, phenotypic variance, skeletal morphology, *Stylopoma*, 1526
evolutionarily stable strategy model, quantitative genetic model, 982
extinction, Muller's ratchet, mutations, selection coefficient, 1744
gastropod, genetic constraint, genotype-environment interaction, *Littorina*, predator invasion, selection, shell form, 576
life history, phenology, reproduction, 88

REPRODUCTION—ANIMAL
age-specific mortality, Bruchidae, cost of reproduction, force of mortality, senescence, survival analysis, 1302
aging, *Drosophila melanogaster*, larval development, mutation accumulation, pleiotropy, selection, survival, 445
assortative mating, genetic correlation, heritability, *Hirundo rustica*, sexual selection, sexual size dimorphism, tail ornaments, 417
asexual versus sexual, clones, *Daphnia*, general-purpose genotypes, parthenogens, salinity tolerance, thermal tolerance, 965
badge size, honest signaling, house sparrow, phenotypic quality, reproductive success, 1161
breeding structure, *Chrysemys*, gene correlations, genetic variance, heterozygosity, recruitment, turtles, 1360
clonal structure, disturbance, genotypic diversity, scleractinian corals, 1213
clutch size, condition, heritability, life-history evolution, maternal effects, 658
courtship feeding, mating effort, Orthoptera, paternal investment, sexual selection, sperm competition, Tettigoniidae, 1203
differential allocation hypothesis, female choice, *Hirundo rustica*, ornament size, reproductive effort, sexual selection, 1152
Drosophila, *D. mauritiana*, *D. simulans*, mating behavior, reproductive isolation, speciation, 778
Drosophila, evolution, male mating ability, senescence, 387
Drosophila, hybridization,, 1616
Drosophila pseudoobscura, evolution of sexual isolation, founder principle, genetic drift, Hawaiian *Drosophila*, speciation, 432
effective population size, mating system, polygyny, sex linkage, sex ratio, 1329
female choice, mate recognition, mating preferences, *Physaelaemus pustulosus*, sexual selection, species recognition, 647
geminate species, Isthmus of Panama, reproductive isolation, speciation, 1883
interference, resource partitioning, sexual reproduction, sib competition, 977

REPRODUCTION—PLANT
adaptation, Colorado, fluorescent dyes, hummingbirds, male and female function, nectar production rate, pollen dispersal, pollination success, 25
alpine, genetic variation, phenotypic variation, *Polemonium viscosum*, wildflowers, 1073
animal-pollinated plants, attraction size, flower size, pollinator attraction, sex allocation, evolutionarily stable strategy, 1711
aperture number, male fitness, pollen, pollen germination, pollen life expectancy, pollen-tube growth rate, polymorphism, 1080
asexual reproduction, biparental inbreeding, cost of sex, kin selection, self-fertilization, 1874
assortative mating, chloroplast DNA (cpDNA), cytonuclear disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1432
Astrocaryum mexicanum, effective population size, gene flow, neighborhood, palm, pollen dispersal, seed dispersal, tropical rain forest, 75
Begonia, inbreeding depression, mating-system evolution, monoecious herb, outcrossing rate, 125
biparental inbreeding, fitness estimation, genetic markers, inbreeding depression, *Mimulus*, outcrossing, selfing, 361
Bombus, *Ipomoea*, outcross rates, pollen discounting, polymorphism, selfing, selfing rates, 1688

Chiloglottis trilabra, floral evolution, floral height, orchid, plant-animal interaction, pollination, pollinator limitation, pseudocopulation, selection, sexual deception, thynnine wasp, 1681
colonizing species, gynodioecy, inbreeding depression, *Trifolium hirtum,* 1472
conservation biology, heterosis, inbreeding depression, population size, *Scabiosa columbaria,* 1669
conservation biology, male sterility, outcrossing rate, plant density, population size, *Salvia pratensis,* 1094
copper tolerance, developmental selection, *Mimulus guttatus,* pollen selection, seed abortion, 13
cryptic incompatibility, *Eichhornia paniculata,* genetic markers, pollen-tube growth, Pontederiaceae, siring success, tristyly, 925
cryptic self-incompatibility, *Erythonium grandiflorum,* inbreeding depression, mating system, outcrossing distance, outcrossing rate, preferential outcrossing, 915
Dalechampia, evolution, mating systems, phylogeny, pollination ecology, 1480
demographic genetics, mating system, Plantaginaceae, *Plantago lanceolata,* population genetic structure, seed bank, Wright's *F*-statistics, 833
dominance, epistasis, fitness components, inbreeding depression, *Mimulus,* synergism, 864
gene flow, *Lathyrus latifolius,* male reproductive success, mating system, naturalized species, paternity analysis, 98
genetic correlation, sex allocation, 946
genetic variation, heritability, *Lythrum salicaria,* reproduction characters, selection, 1457
Hydrophyllum appendiculatum, inbreeding depression, maternal effects, outcrossing, selfing, 374

Reptiles
adaptation, geographic variation, growth, prey availability, sexual size dimorphism, snake, 321
adaptive coloration, antipredator mechanisms, aposematism, elapid snakes, mimicry, vertebrates, 227
antipredator behavior, color pattern, garter snake, genetic correlation, heritability, interpopulation variation, quantitative genetics, *Thamnophis ordinoides,* 844
breeding structure, *Chrysemys,* gene correlations, genetic variance, heterozygosity, recruitment, turtles, 1360
color-pattern variation, crypsis, natural selection, *Nerodia sipedon,* predation, snakes, 1819

Selection—Experimental
artificial selection, developmental rate, *Drosophila,* 1625
bacteriophage, experimental molecular evolution, molecular systematics, parametric bootstrap, restriction-site evolution, selection, T7, 993
genetic correlation, sex allocation, 946

Selection—Natural
adaptation, Brownian motion, directional selection, *Drosophila virilis,* macroevolution, parsimony, phylogeny, rate tests, stabilizing selection, 1240
adaptation, calcium concentration, *Gasterosteus aculeatus,* geographical variation, postglacial differentiation, selective predation, 906
adaptive surface, correlated response, directional selection, disruptive selection, genetic correlations, peaks and valleys, punctuation, stabilizing selection, 280
behavior, density-dependent natural selection, *Drosophila melanogaster, K*-selection, pupation height, *r*-selection, stabilizing selection, 176
clutch size, condition, heritability, life-history evolution, maternal effects, 658
color-pattern variation, crypsis, *Nerodia sipedon,* predation, snakes, 1819
correlational selection, floral evolution, phenotypic and genetic correlations, *Raphanus raphanistrum,* 704

Selection—Sexual
age-specific mortality, Bruchidae, cost of reproduction, force of mortality, senescence, survival analysis, 1302
assortative mating, genetic correlation, heritability, *Hirundo rustica,* reproduction, sexual size dimorphism, tail ornaments, 417
Carpodacus mexicanus, male mate choice, pleiotropy, plumage coloration, 1515
courtship feeding, mating effort, Orthoptera, paternal investment, sperm competition, Tettigoniidae, 1203
courtship sounds, *Drosophila,* female choice, 768
differential allocation hypothesis, female choice, *Hirundo rustica,* ornament size, reproductive effort, 1152
Drosophila spp., female choice, pheromone, picture-winged *Drosophila,* sexual behavior, 1407
female choice, mate recognition, mating preferences, *Physaelaemus pustulosus,* species recognition, 647
female preferences, peak-shift, sexual imprinting, 333
gametic selection, house mouse, interdemic selection, *Mus musculus,* simulation, *t*-complex, transmission distortion, Wright's *F*-statistics, 1342
leks, sexual dimorphism, sharp-tailed grouse, 691

Senescence
aging, density dependence, extrinsic mortality, life history, life span, 877
aging, *Drosophila melanogaster,* larval development, mutation accumulation, pleiotropy, reproduction, selection, survival, 445
cellular autonomy, cytoplasmic genomes, immortality, recombination, 1293
Drosophila, evolution, male mating ability, reproduction, 387

Sex
colonizing species, gynodioecy, inbreeding depression, *Trifolium hirtum,* 1472
genetic variation, heritability, *Lythrum salicaria,* reproduction characters, selection, 1457
Haldane's rule, heterogamety, 1885, 1888

Sex Ratio
development time, host size, *Muscidifurax raptor,* parasitoid wasps, 1876
effective population size, mating system, polygyny, sex linkage, 1329
environmental sex determination, genotype-environment interaction, major factors, *Menidia menidia,* polygenic, proportion of females, sex-determining mechanisms, 487
Haldane's rule, hybrid sterility, meiotic drive, speciation, 685

Symbiosis
adaptive plasticity, Cercomeria, Digenea, Eucestoda, evolutionary loss, macroevolution, Monogenea, morphological diversification, parasitic platyhelminths, phylogenetic systematics, 495
Aedes albopictus, cytoplasmic incompatibility, reproductive isolation, *Wolbachia,* 673
allozyme differentiation, host preference, host race formation, Salicaceae, sawfly, 300
Anguilla anguilla, A. rostrata, eels, parasites, 1632
development time, host size, *Muscidifurax raptor,* parasitoid wasps, sex ratio, 1876
Diplomonadida, Dollo's Law, *Giardia,* parasites, specialization, 308
disease, genetic polymorphism, herbivory, specialist versus generalist, 1721
Eurosta solidaginis, gall, herbivory, host race, sympatric speciation, 1696
geographic structure, host selection, host shifts, host specificity, oviposition preference, *Papilio,* population divergence, specialization, Umbelliferae, 1585
herbivores, *Ipomoea purpurea,* parasites, pathogens, selection, 970

Variation—Genetic
accuracy, maximum parsimony, neighbor-joining, phylogenetic estimation, simulation, UPGMA, 471
adaptation, body growth, Collembola, genetic correlation, heavy metal, *Orchesella cincta,* tolerance, 619
adaptation, cactus, *Drosophila mojavensis,* genetic correlation, heritability, host race, life history, reaction norm, *Stenocereus,* 750
additive genetic variance, dominance, founder effect, heritability, inbreeding, population bottleneck, 949
allopatric speciation, genetic revolutions, non-allopatric speciation, population bottleneck, postzygotic isolation, prezygotic isolation, reinforcement, reproductive isolation, speciation, 1637
allozyme, cline, genetic distance, Gerridae, transition zone, 957
allozymes, Atlantic rocky shores, cline, dispersal, genetic distance, inheritance of shell characters, morphometry, shell polymorphism, Spain, speciation, 1770
alpine, phenotypic variation, *Polemonium viscosum,* reproduction, wildflowers, 1073
amphibian, development, genetic variance, growth, hybridogenetic, metamorphosis, phenotypic plasticity, *Rana esculenta, R. lessonae,* tadpole, 1805
antagonistic pleiotropy, environmental heterogeneity, genetic correlations, genotype-environment interaction, trade-offs, 327
Arabis, density, epidemiology, frequency-dependence, plant pathogens, *Puccinia,* 111
assortative mating, chloroplast DNA (cpDNA), cytonuclear disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1432
beetles, *Cicindela dorsalis,* mitochondrial DNA, morphology, phylogeography, 1192
biogeography, birds, chickadees, genetic divergence, haplotype diversity, mtDNA, *Parus,* phylogeny, phylogeography, Quaternary, speciation, 195
breeding structure, *Chrysemys,* gene correlations, genetic variance, heterozygosity, recruitment, turtles, 1360
Callosobruchus maculatus, larval performance, oviposition preference, plant-herbivore interactions, 166
canids, foxes, gene flow, genetic divergence, mtDNA, 1313
central and marginal populations, correlated responses, environmental stress, metabolic rate, realized heritability, species borders, 1255
chloroplast DNA, clonal variation, hybridization, ribosomal DNA, *Taraxacum,* 136
cladogenesis, extinction, phylogenetic tree, phylogeny, speciation, tree balance, tree symmetry, 1171
clonal structure, disturbance, genotypic diversity, scleractinian corals, 1213
conservation biology, male sterility, outcrossing rate, plant density, population size, *Salvia pratensis,* 1094
descent measures, dominance, epistasis, extinction and recolonization, genetic variance, migration, population structure, random genetic drift, 1758
DNA fingerprinting, genetic diversity, island populations, population structure, silvereye, *Zosterops lateralis,* 1105
DNA profile, endangered species, kinship, parentage, pedigree analyses, *Picoides borealis,* population structure, 185
DNA sequence data, maximum-likelihood estimators, phylogenies, selection coefficients, 1420
dominance, epistasis, fitness components, inbreeding depression, *Mimulus,* synergism, 864
Drosophila, D. mauritiana, D. simulans, mating behavior, reproductive isolation, speciation, 778

Drosophila pseudoobscura, evolution of sexual isolation, founder principle, genetic drift, Hawaiian *Drosophila*, speciation, 432
drought stress, flood tolerance, norms of reaction, phenotypic plasticity, *Polygonum persicaria*, 1032
electrophoresis, evolutionary novelty, fossils, introgression, land snail, *Mandarina aureola*, *M. ponderosa*, morphology, shell, 1539
Eurosta solidaginis, gall, herbivory, host race, sympatric speciation, 1696
extinction, Muller's ratchet, mutations, selection coefficient, 1744
genotype-environment interaction, plasticity, reproductive effort, size variability, *Solidago*, 61
heritability, *Lythrum salicaria*, reproduction characters, selection, 1457
Haldane's rule, hybrid inviability, hybrid sterility, reproductive isolation, speciation, 1606
Haldane's rule, hybrid sterility, meiotic drive, speciation, 685
interference, resource partitioning, sexual reproduction, sib competition, 977
mottled hybrid zone, *Mus musculus domesticus*, Robertsonian fusion, tobacco mouse, zonal raciation, 1374

VARIATION—PHENOTYPIC
adaptation, geographic variation, growth, prey availability, sexual size dimorphism, snake, 321
adaptive radiation, diversification, null models, phylogeny, topology, 253
alpine, genetic variation, *Polemonium viscosum*, reproduction, wildflowers, 1073
annuals, character correlations, fitness, light response, norms of reaction, phenotypic plasticity, photosynthesis, *Polygonum persicaria*, 1009
Bouteloua rigidiseta, competition, fecundity, perennial grass, phenotypic plasticity, reaction norms, 1446
Bromus diandrus, density response, genotype-by-environment interaction, plant competition, phenotypic plasticity, 801
Bouteloua rigidiseta, competition, fecundity, perennial grass, phenotypic plasticity, reaction norms, 1446
Bryozoa, natural selection, phenotypic variance, skeletal morphology, *Stylopoma*, 1526
butterfly, correlation, nymphalid groundplan, pattern, 593
character displacement, female mimicry, *Ficedula* spp., interspecific competition, species recognition, 939
correlational selection, floral evolution, natural selection, phenotypic and genetic correlations, *Raphanus raphanistrum*, 704
correlations, finches, general size, growth trajectories, 1506
disease, genetic polymorphism, herbivory, specialist versus generalist, 1721
disease, herbivory, immunity, phenotypic plasticity, predation, 325
drought stress, flood tolerance, genetic variation, norms of reaction, phenotypic plasticity, *Polygonum persicaria*, 1032
homeostasis, nitrogen, norms of reaction, nutrient stress, phenotypic plasticity, *Polygonum persicaria*, specialization, 1050

VIRUSES
bacteriophage, experimental molecular evolution, molecular systematics, parametric bootstrap, restriction-site evolution, selection, T7, 993
DNA sequence data, maximum-likelihood estimators, phylogenies, selection coefficients, 1420
